

ABSTRACT OF THE DISCLOSURE

An electric beverage maker includes a lower, water boiling vessel, a funnel extending into the lower vessel and having an upper compartment for receiving a beverage, and an upper vessel mounted over said funnel to receive water which has
5 passed up said funnel through said compartment, and from which the beverage is dispensed. The lower vessel is formed with an opening in its lower region, which is closed by a thick film electric heater. The heater is controlled by a control which operates to disable the heater until such time as the control is reset manually by a user.
